Go green with your yard!

www.NCcleanwater.org

Use fewer chemicals for healthy people, pets, and water!

What should I do?

- Test soil before you fertilize (free kits available).
- Use pest/herbicides sparingly, if at all.
- Use integrated pest management: bugs eat other bugs!
- Follow product directions carefully; more doesn't mean better!
- Plant trees and leave more natural areas in your yard.
- Smaller lawns=less mowing, less water, less \$\$.

Rain Gardens

- An alternative to a traditional flower bed
- Provides a place for rainwater to filter into the ground slowly
- Easy to build in your own yard
- Visit our website for more information
